DESIGNBASE

DESIGNBASE VECTOR DATABASE SYSTEM

DesignBase vector is an image/archive multiuser database software system made by EAT. The system – in addition to the EAT format – is able to administrate the standard formats TIFF, BMP, JPEG and the main design formats of other textile CAD/CAM systems.

- Data access can be granted on different levels, categories, attributes and with different restrictions for specific users or groups
- The designs can be displayed in different forms, like overview, detail view or repeated view for example
- Colouring the files in the DesignBase without reopening them in the design system
- Customized input masks or documentation sheets with all necessary information of the design are no problem
